

CUSTOMER JOURNEY MAP

This map represents how an energy planner or analyst interacts with electricity consumption dashboard from need to insight.

Stage	Need	Action	Touchpoint	Pain Point	Opportunity
Discover	Wants to understand electricity consumption patterns	Searches for energy data and insights	CSV files, government datasets, online reports	Data is scattered across multiple sources and formats	Single interactive electricity consumption dashboard
Explore	Needs insights by state, region, and time period	Manually browses through spreadsheets and reports	Excel files, PDF reports, multiple websites	Time-consuming analysis and data inconsistency	Filter-enabled Tableau dashboard with regional comparisons
Engage	Wants to compare consumption factors and trends	Creates custom charts and visualizations	Excel charts, basic visualization tools	Limited interactivity and static presentations	Pre-built electricity consumption dashboard with dynamic filters
Decide	Prepares insights for energy planning decisions	Takes screenshots and summarizes findings	Presentations, manual reports	Dry data storytelling and limited visualization	Use Tableau story points with professional captions
Act	Implements energy planning strategies	Shares insights with stakeholders	Email attachments, printed reports	Difficult to share interactive content	Web-based dashboard with shareable links and export options
