

Ideation Phase

Brainstorm & Idea Prioritization Template

environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not

Date	31 January 2026
Team ID	LTVIP2026TMIDS24253
Project Name	Electricity-Consumption-Analysis
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Our team of four members gathered to identify a significant data analysis challenge that would demonstrate our collective expertise in data visualization, web development, and professional project management. After extensive discussion, we selected the electricity consumption analysis project as it offered a comprehensive dataset of 16,599 records across 35 Indian states, providing ample opportunity for meaningful insights and professional visualization development. The problem statement focused on analyzing electricity consumption patterns across different regions, time periods, and consumption scenarios to provide actionable insights for energy planning and policy decision.

Step 2: Brainstorm, Idea Listing and Grouping

During our collaborative brainstorming session, we generated numerous ideas for approaching the electricity consumption analysis. Our team members contributed diverse perspectives including temporal analysis approaches, geographic visualization strategies, comparative consumption patterns, and user experience design concepts. We systematically grouped these ideas into logical categories such as time-based analysis, regional comparisons, seasonal variations, and sector-specific consumption patterns. Each team member brought unique expertise in areas like Tableau visualization, Flask web development, responsive design, and data analysis, allowing us to create a comprehensive approach that addressed multiple aspects of the electricity consumption challenge.

Step 3: Idea Prioritization

Our four-member team employed a structured prioritization methodology to evaluate and rank the brainstormed ideas based on technical feasibility, impact potential, user value, and implementation complexity. We collectively assessed each idea's contribution to the overall project objectives, considering factors such as data visualization effectiveness, web application functionality, professional presentation quality, and portfolio enhancement value. Through collaborative decision-making and consensus building, we prioritized the development of 12 professional Tableau visualizations, an interactive Flask web application, comprehensive documentation, and professional demo materials, ensuring our project would demonstrate our team's collective technical capabilities and professional project management skills.

Phase 2: Brainstorming & Ideation
